

Name of the Public Authority: Indian Institute of Remote Sensing (IIRS)

CONCLUDING SUMMARY

An exhaustive and citizen friendly website. Substantial information has been disclosed relevant to space science which is of use to academics, student community, scientific community, researchers and the general public.

There are, however, areas having scope for improvement. Recommendations have been given against the parameters concerned in the above report. Additionally the following two points may be considered:-

- (i) As IIRS is a constituent of ISRO and most of the suo-motu disclosure under RTI in the IIRS website have been linked to ISRO website, it is recommended that the information may be separately uploaded on the IIRS website instead of multiple links to ISRO website. This will make the website more citizen friendly as the citizen would not have to repeatedly shuttle between the ISRO and IIRS websites.
- (ii) Though the IIRS and ISRO website combined contains invaluable information the same are scattered. In view of the fact that IIRS has not published separate handbook for information, it is recommended the important information may be compiled in the form of an electronic handbook and upload it on its website.
